Lego and Building Club: Students will be creating Lego sculptures within their groups. Math, science, engineering skills and creativity will show what they have done!

Bible Stories & Book Club: Students are going to explore books & Bible stories and will listen to a story, practice their reading skills, and create a fun craft based on the story.

Pop Culture Club: aims to develop knowledge and insight among the students regarding current events and unique events in history.

Video Gaming & Programming: Play video games to study game design. Students have the option of creating their own game in Game Builder Garage, or in another software that is available to them. Students who are developing their own game will work on it throughout the year and showcase it in an early stage (Alpha - December), a mid development stage (Beta - February/March), and a final release stage in May. Students will vote on the best games and can potentially earn a gift card for their product.
